

# FAC-R FREQUENCY TO ANALOG CONVERTER – WITH BLUETOOTH

Ideal for converting your frequency output to analog with an easy-to-use handheld mobile device.

## APPLICATIONS

The FAC-R Frequency to Analog Converter is ideal in any application when sending an analog signal to a PLC or other control system. It works with any frequency output sensor, such as flow meters, tachometers, pumps/motors, and linear or rotational encoders.

## FEATURES

- Full input frequency range 0.25Hz to 5,000Hz
- Analog output signal defaults to 4-20mA and 0-10V (0-5V, 1-5V & 2-10V available through PC Toolkit or "AWL Mobile Toolkit" mobile app)
- Excellent linearity, high temperature stability and long-term stability
- Powered by 10-28VDC
- 16-bit analog output resolution

## BENEFITS

### Setup Options

Choose from the "AWL Mobile Toolkit" application, the AW-Lake Toolkit PC software, or the local switches on the device to set your parameters.

### Economical

This device is a much better investment than a high-speed PLC counter card and eliminates the need for a multimeter.

### Linearizer

To improve output accuracy with some flow meters which are non-linear, a 10-point linearization table can be utilized through the Bluetooth app.

### Wireless Hand-Held Display

Using the Bluetooth mobile app on your phone, you now have a wireless flow monitor in your hand!

### Streamlined Setup

The Bluetooth app makes setup and scaling much easier, because no longer do you need to walk from the device to your monitoring equipment when fine-tuning your adjustments.
